SAN ANGELO

Welcome to the second annual Texas Sheep & Goat Raisers' Association Stockman's Sale!

We are privileged to work with some of the best commercial sheep and goat producers in the country. In this sale, you will find sires and females to suit any herd - from club-lamb style to range-flock friendly. Our producers stand behind their genetics and have production experiences spanning multiple generations.

As the largest sheep and goat membership-driven organization, we hope this sale provides an opportunity to provide more extensive genetics to buyers and showcase the high-quality sheep and goat operations in Texas.

Thank you for your interest and we look forward to seeing you March 14th!

LAMB & GOAT BARN, SAN ANGELO FAIRGROUNDS

2026 Texas Stockman's Sale

Rules and Sifting Guidelines

The reason behind the rules and sifting guidelines is to ensure the transfer of healthy, viable livestock to their new owners.

Eligibility

- **Rams and ewes** will need to be at least 6 months of age at the time of the sale. Rams need to have a minimum weight of 100 lbs and ewes need to have a minimum weight of 80 lbs. Sheep cannot be older than 24 months of age at the time of the sale. Teeth will be checked by the sifting committee and sheep should not have more than 4 permanent bottom incisors, but it is acceptable if their I₃ incisors (3-year-old teeth) have erupted. Sheep with 6 full permanent teeth will not be allowed.
- **Rams** will need to have a minimum scrotal circumference of 26 cm for lambs (under 1 year of age) and a minimum of 30 cm for yearlings and 2-year olds.
- **Billies and nannies** will need to be at least 6 months of age at the time of the sale. Billies should have a minimum weight of 75 lbs and nannies should have a minimum weight of 60 lbs. Billies cannot be older than 24 months of age at the time of the sale. Teeth will be checked by the sifting committee and goats should not have more than 4 permanent bottom incisors, but it is acceptable if their I₃ incisors (3-year-old teeth) have erupted. Goats with 6 full permanent teeth will not be allowed.
- **Billies** will need to have a minimum scrotal circumference of 22 cm for billy kids (under 1 year of age) and a minimum of 26 cm for yearlings and 2-year olds.
- All livestock must have an official scrapie tag in their ear at the time of unloading.
- All rams will need to have a negative ELISA test for *Brucella ovis* within 30 days prior to the sale date. Documentation **WITH COPIES** of ALL B.

OVIS TESTING will be required prior to unloading of rams. **IF ANY RAM IN THE TEST GROUP IS POSITIVE, NONE WILL BE SOLD.**

- The pregnancy status of all females must be known at the time of sale. If females have been exposed to males- it is expected that the consignor has had the females ultrasounded to determine pregnancy status. It is acceptable if ewes and nannies have lambed previously to the sale, but their offspring must be weaned prior to the time of sale. Females may be sifted if there is any indication of udders being unsound (including excessive teat size).
- It is not a requirement that animals be shorn at all, but if they are shorn, it is expected that this be done at **minimum 14 days** prior to the sale and with 13 tooth or 9 tooth combs. For hair sheep- if the committee believes the animal is shorn in a manner (slick with fine or surgical blades) in an attempt to conceal excessive fleece growth/poor shedding ability, the animal may be sifted.
- It is expected that sellers will provide a guarantee of their consignments. If a buyer in good faith deems an animal unsuitable or sterile, the consignor will replace or refund at comparable value.
- Upon purchase, the livestock become property of the buyer. However, in the event the buyer is not physically present at the sale, sellers will be responsible for maintaining possession of the lot until pickup can be arranged. It will be strongly suggested that online buyers arrange pickup of their purchase within 7 days unless otherwise arranged between buyer & seller.

Timeline

- All livestock will need to be in their designated pens by **12:00 pm noon on Friday** so that the Health Sifting Committee can start inspections on time.

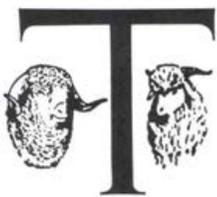

- All consignors will be responsible for the feed, water, and bedding in the pens. Shavings will be available on site for purchase. Other types of bedding are allowed but will need to be supplied by the consignor.

Sifting Guidelines

**To ensure that healthy, viable livestock are sold, sifting will take place the day prior to the sale. All livestock will be examined for clinical signs of disease that could be detrimental to the long-term health and fertility. Final decision to sift will be at the discretion of the lead veterinarian. Sifted animals will be removed from the sale and if the reasoning for the sift is contagious disease, these animals will not be allowed to stay on site.*

- Livestock will be examined, and testicles palpated for abnormalities, swelling and other signs of potential injury or infection. Testicles will also be measured by the sifting committee.
 - Notably: a fertility test will not be required. Due to the “off-season” timing of this sale, reduced fertility at this time of year could be a result of normal seasonal reproductive patterns.
- Animals with contagious diseases will be sifted. Other livestock in the same consignment may also be sifted at the discretion of the veterinarian if there is a significant risk of disease transmission.
 - Examples include but are not limited to:
 - Clinical signs of pneumonia/respiratory infection
 - Abscesses indicative of Caseous lymphadenitis
 - Active infections of the eye
 - Pizzle/sheath rot
 - Foot rot
 - Excessive diarrhea
 - Active soremouth
 - Severe external (lice, keds) or internal parasite infections (bottle jaw, severe anemia).

- *It is strongly recommended that all livestock be dewormed and treated for external parasites within 30 days prior to the sale.*
 - Non-transmissible reasons for sifting:
 - Livestock with over- or undershot jaws will be sifted.
 - Livestock with rectal or vaginal prolapse will be sifted.
 - Livestock in poor body condition (less than 2.5) will be sifted.
 - Livestock in excessively fat condition (4.5 or greater) will be sifted.
-

IMPORTANT

GROUP CHOICE

Each consignor will have the option to have 2 individual lots and the rest will be sold in group-choice format. Individual rams/billies will be sold as single lots.

For group choice lots, pairs or trios of rams/billies will be moved into the sale ring at one time and auctioned at a per head price. **The buyer with the winning bid will have the option to take one or all at that per head price. If the entire lot is not taken, then bidding will restart for the remaining sires.** The size of those groups will be determined by the sale committee.

Watch the Sale on CCI.live!

The best, the fastest and most comprehensive marketing & bidding tool!

How to Bid Online...

- As a **buyer**, you do not need an account or to login to watch the sale but you must have a validated account to bid.
- After you are logged in, you must proceed to the sale page for any and every auction and click **"Get Buyer Number."** Some auctions require a pass-code to obtain a buyer number even after you are approved by CCI.live. Pass codes generally come from the sale manager or ranch for that particular sale.
- CCI.live will operate with ease on a **cellular device, laptop, desktop or tablet.**
- A **modern or current browser** is important and will make your experience better. You do not need to install the app on cellular devices to watch a sale. CCI.live is a browser-based application meaning it will play on most new browsers, but you can also download the CCI.live app at the Apple App Store or through Google Play.
- **For successful bidding you must have good Internet service!** It is very important to be stationary. If you are driving and bidding, expect to have some service issues. If you are stationary on a good device, with healthy Internet, expect a very successful bidding environment. If you have slow Internet watch the "asking price" on the screen - it is real time and refresh your browser if you feel like you have some lag.
- **Support line open during all sales. 405-400-9505** - Please contact the ranches for invoices and trucking.

Breeder Spotlight: Drennan Sheep Co.

Drennan Sheep Company is a joint family operation between Brent & Mitzi Drennan and Cade & Kaylee Nobles. We have been involved in the sheep business for over 60 years with Finewool type sheep and transitioning to Dorpers in 2016.

Our flock has grown to over 100 registered mature ewes. Our daughters grew up and were raised in the sheep pen and now our grandchildren are showing breeding sheep across the state. Brynlee, our oldest grandchild, has had great success exhibiting the Supreme Champion Ram in Fort Worth the past 4 years!

***Our consignments will all be sired by the ram pictured.**

	DORPER RAM	DRENNAN SHEEP CO. Mason, Texas
	Individual lot	

Class: RAM LAMB
Tag: 2565
Birthdate: 4/1/2025
Birth Type: ET / TWIN
Comments: Sire: Roeder Ranch Ram; Mother was the Champion Dorper Ewe at Fort Worth, San Antonio and Houston; growthy/breed character, muscular

	DORPER RAM	DRENNAN SHEEP CO. Mason, Texas

Tag:	220	
Birthdate:	1/15/2025	
Birth Type:	TWIN	
Comments:	From proven sire, he's made right with plenty of muscle; Loose Cannon/TFSS 178	

I began my sheep and goat ranching business as a 4-H Club member over 65 years ago. As a retired County Agricultural Agent, I found my passion in raising Dorpers. All of my purebreds are at least 97% Dorper. My purebreds are consistently more productive, better mothers and perform better on the range.

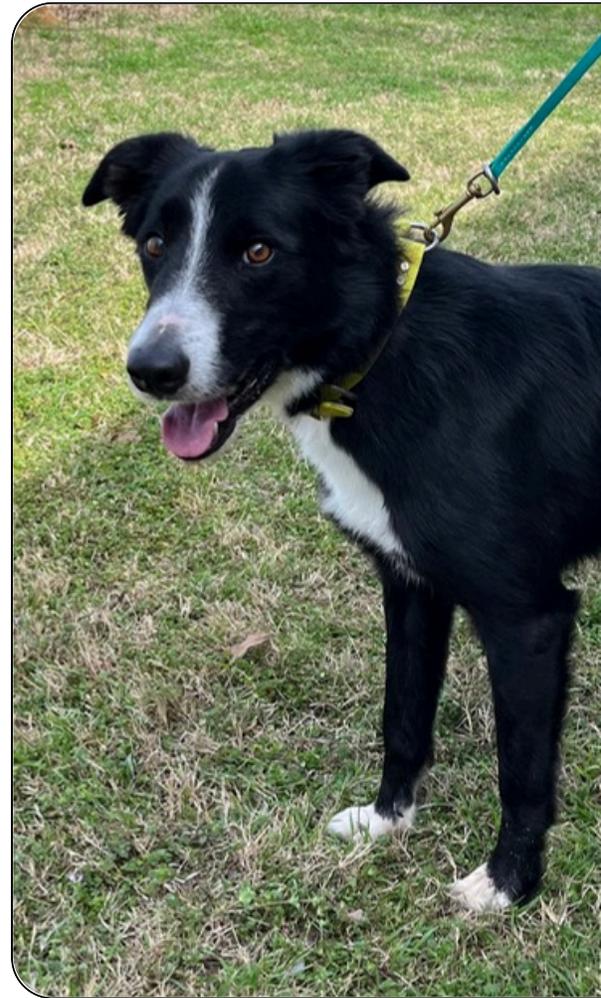

My sheep are run on the range with 20% molasses tubs in front of them year-round. I lamb in the pasture and only bring those to the house that have been cosigned to shows or sales. We exhibit many of our sheep at the major livestock shows and we have been blessed to be very competitive over the years. **-Preston Faris**

WORKING STOCK DOG

CONSIGNMENT BY BRENT PHELPS

(940) 367-5507

- Male, Border Collie, 4 Yrs. Old, Born 11-19-21, Neutered
- Roy has completed his training and works with voice or whistle.
- I have gathered sheep with Roy at over 600 yds.
- I have not worked cattle with Roy, but with his strong herding instincts I would venture to guess he would work goats.
- Roy is good around my dogs. However, if another dog is aggressive toward him, he will not back down.
- He has worked sheep in the presence of guard dogs that are accustom to herding dogs.
- Roy is a high energy dog that needs lots of work or exercise.
- I do not let my dogs run loose. Because of their strong herding instinct, when they are not working, or being supervised by me, they are in their kennel or crate.
- Roy is good and friendly around adults, but he has not been around children.
- I have barn cats, but when exposed to them Roy is always with me.
- Roy is crate trained, and rides easily on a 4 wheeler. He also loads easily into the bed of a pickup.
- If you have questions about Roy, please give me a call. I will also be available on Friday, before the auction, when doing a demo with Roy in the arena.

ROY

My reserve on Roy is \$2,500.00.

Breeder Spotlight: North Carolina Sheep

System

The North Carolina Sheep System is a partnership between North Carolina State University and North Carolina Department of Agriculture research stations. We exist to serve the teaching, research, and extension missions of the land grant system.

Starting with just 20 Katahdin ewes in 2020, the system has grown to over 250 ewes separated into spring and fall lambing flocks. All ewes are enrolled in the **National Sheep Improvement Program**. Lambs are developed on grass in a 30+ inch rainfall region starting shortly after birth. Ram lambs undergo an **extensive post-weaning parasite and growth evaluation**. Fecal egg counts, FAMACHA scores, and weight data are collected every two weeks from mid-June to late August while lambs graze parasite-rich pastures.

Ewe lambs are evaluated for post-weaning **feed efficiency** using the Vytelle Sense system before returning to pasture and being exposed as ewe lambs. These data are combined with estimated breeding values to identify genetics more likely to work in the hot, humid, forage-based production systems of the Southern United States.

We are thankful for opportunity to be a part of this sale with the Texas Sheep and Goat Raisers!

Breeder Spotlight: Oak Hill Ranch

Growing up, Chacho Cahill's family raised Angora goats and his father, Jimmy Cahill was involved in not only raising Angora goats, but marketing products made from mohair worldwide.

With advice and encouragement from Wesley Glass, the Cahills bought 3 of the best white dorper ewes. And so began Oak Hill Ranch. With an intense flushing program using some of the highest quality white dorper rams, and a heavy influence from Wildcat Ranch and N&K genetics, the sheep were recognized as some of the best.

Over the years, they have stayed true to the purpose and function of the white dorper breed and tried to keep their sheep **muscular** and **well-balanced** with **deep bodies** and **functional front ends**. Recently, collaborations with Ruffin Ranch have helped to sustain the quality and enhance the genetic diversity of their flock.

Chacho & Dawn Cahill

Breeder Spotlight: Half Circle Six Ranch

Half-Circle Six Ranches, located in central West Texas, are owned and operated by the Glass family. Philip's great-grandfather, J. L. Glass, pictured above with the horse, arrived in west Texas from North Carolina in 1883 then homesteaded four sections in Sterling County in 1890 and the family still ranches on the same property. Today the ranches continue family tradition by supporting ranching enterprises including cattle, sheep, and goats.

Dorper sheep and exotic deer and antelope graze the rocky limestone hills and spring fed creek bottoms of Chalk Springs Ranch. Their goal is to produce high quality, range-raised breeding stock Dorper sheep for sale to other livestock producers. They seek out the best available genetics and breed animals to meet the breed standards that have made the sheep so attractive for today's markets.

Philip & Jennifer Glass

Half-Circle Six Ranches has been producing quality "Ranch Raised Dorpers" for over 26 years. Let us help you get started raising Dorper sheep. With a flock of fullblood and commercial Dorper sheep we have sheep to fit any operation.

Scrapie Tag:	5220-5229	<i>COMMERICAL</i>
Birthdate:	EARLY SPRING 2025	<i>EXCELLENT MOTHERS</i>
Birth Type:	UNKNOWN	<i>DOCILE</i>
Comments: This year, I decided to treat these yearling ewes like I treat our 1st calf heifers - we turned out Barbado Rams to get a small lamb. Expect some pain babies with some horns. Regarding the ewes themselves, they are top replacement quality with Wildcat genetics and a splash of Katahdin to enhance mothering ability.		

Breeder Spotlight: Wildcat Ranch

Wildcat Ranch is a purebred White Dorper and Dorper operation in Sterling City, Texas. The flock is owned and managed by Wesley and Ashley Glass. Their kids show their home raised sheep across the country.

Top quality livestock is expected at the Wildcat, with the emphasis on **skeletal build, meat production**, and a **good temperament**. However, the sheep are also expected to perform on their own in the pasture the way God intended for them to. Maternal traits of the ewes and **functionality** in the rams are fundamental.

Wesley & Ashley
Glass

	WHITE DORPER RAM	AARON JENNINGS Fredonia, Texas
	Individual lot	

Class: YEARLING
Birthdate: FALL 2024

Comments: This functional and deep bodied ram is a result of Wildcat WD x Royal White ewes. I like his production value and shedding ease. His first lambs are hitting the ground currently and have great vigor.

	DORPER RAMS	AARON JENNINGS Fredonia, Texas
	Pen of 5	

Class: YEARLING
Birthdate: SPRING 2025

Comments: This set of rams are from fullblood stock selected for muscle and doability. They are ready to turn out and make an incredible set of terminal fall lambs.

	WHITE DORPER / ROYAL WHITE EWES	AARON JENNINGS Fredonia, Texas
	Pen of 8	

Class: YEARLING

Tag: *BRED - EXPECTED DATE: MARCH 15-APRIL 15

Birthdate: FALL 2024

Comments: All hair, big stout ewes sired by Wildcat Rams and Royal White ewes. Bred back to Wildcat rams for late March-April lambs. Have been drenched once in their life at weaning.

	WHITE DORPER EWES	AARON JENNINGS Fredonia, Texas
	Pen of 27	

Class: YEARLING

Tag: *BRED - EXPECTED DATE: MARCH 15-MAY 15

Birthdate: WINTER 2024-EARLY 2025

Comments: This set of ewes is sired by Powell Holman rams and bred back to a new Powell Holman ram from their latest sale. They can begin lambing late March into May. Drenched 3 times in their lifetime.

Breeder Spotlight: Hodges Livestock

Hodges Livestock is owned and operated by Kade and Morgan Hodges, in Sterling City, Texas. Our mission is to be good stewards of God's creation while raising productive and profitable livestock for both consumers and fellow ranchers.

We specialize in raising commercial Royal White hair sheep, known for their **productivity, hardiness, and profitability**. Our sheep blend **performance** and **carcass traits** with **hardiness, maternal skills**, and parasite resistance. Hodges Family Royal White genetics have been sent to 25 states nationwide.

The Hodges Family has been raising livestock in Sterling County since 1889 and first branched into the sheep industry in 1907. Hair sheep were brought to the ranch in the late 1990's by Clinton Hodges and his son, Wesley.

	ROYAL WHITE RAM	HODGES LIVESTOCK Sterling City, Texas
	Individual lot	

Class: RAM LAMB
Tag: 5361
Birthdate: 2/23/2025
Birth Type: TWIN
Comments: This Royal White ram lamb demonstrates a 44.63% lower fecal egg count (FEC) than the average of his contemporaries indicating more natural parasite resistance, which can reduce the need for deworming and improve the overall health of the flock. Born and raised as a twin, by a ewe born a twin herself, this ram lamb is bred to put profit in your program.

	ROYAL WHITE RAM	HODGES LIVESTOCK Sterling City, Texas

Breeder Spotlight: Peak Ovine, LLC

Peak Ovine LLC was founded in 2024 by Dax and Michelle Dittrich with a clear vision: to elevate the American lamb market through world-class genetics and uncompromising quality. Our journey began while researching premium, high-end lamb meat. That search led us across the globe to Tattykeel in Oberon, NSW, Australia – home of the Tattykeel Australian White program and the breed’s original creator. There, we secured ownership in “Carbide,” the first-ever Elite Stud ram imported for the U.S. market – establishing a historic foundation for our breeding program.

Breed Advantages

Our Australian Whites are:

- Rapid growing, reaching 110–140 lbs by 6 months
- Powerfully built, with mature rams weighing 200–240 lbs
- Polyestrous, allowing for flexible and accelerated breeding cycles
- 100% hair sheep – no wool, no shearing, low maintenance
- Free from the traditional “lamby” flavor
- Known for low fat melting points, contributing to tenderness and superior eating quality (scientifically validated at St. Charles University)
- Efficient converters with no growth plateau

Our Mission

Peak Ovine is committed to building a premier American program rooted in proven Australian genetics – producing sheep that excel in growth, carcass quality, and eating experience. By combining elite bloodlines with disciplined selection, we aim to set a new standard for lamb production in the United States.

Comments:	R46 is an extremely balanced sheep from end to end. He emboldens the true Australian White look.	

Breeder Spotlight: Sharon Holman

Sharon Holman grew up in a diversified ranching operation spanning Edwards and Schleicher counties. She has spent countless hours tending to livestock and learning the intricacies of ranch management. Sharon's hands-on approach and range management practices have allowed her to consistently raise top quality stock leading her to find success in the showing with White Dorper Sheep, Dorper Sheep and Boer Goats. The Holman Ranch is located 25 miles south of Sonora, Texas. The terrain is rolling limestone hills with live oak, cedar and mesquite. Our Dorpers share the ranch with Angora goats and beef cattle.

The Holman Ranch was established in 1906 and has continued as a family-owned and operated working ranch today. When one considers the scope and vastness of the 9,000 acre Holman Ranch, it is easy to understand why the Holmans demand the traits of hardiness and high maternal instinct in their animals. Holman Dorpers are ranch-raised and ranch-hardy. Holman Dorpers must be able to travel the countryside, forage on their own and lamb unassisted.

Breeder Spotlight: N&K Ranches

N & K Ranches is located in Eldorado, Texas, some 55 miles south of San Angelo, Texas. The ranch produces Boer goats, White Dorper, Dorper and Red Angus cattle. The family has been in the sheep and goat industry since the Kohls family raised Delaine and Mohair goats in Boerne, Texas.

Norman is a stockman who is very well versed in **selection** and **breeding**. The ranch has produced many Champion and Reserve Champions at many stock shows and breeding sheep events. The **prodigy** on the ranch has added to the **genetic base** of both the Boer Goats and the Dorper industry. Look for our consignments in both the Boer Goats and the White Dorsers. We appreciate the effort of the TSGRA promoting this sale.

Breeder Spotlight: Kott Rambouillets

The Kott family has been raising wool sheep in the Texas Hill Country since the early 1940s. We have always concentrated on producing excellent wool, as well as **structurally correct, functional, moderately-framed sheep**.

Production records are available as our flock is enrolled in the NSIP program, as well as, being a GEMS innovator flock. We have **genetically enhanced performance-backed EPDs on wool and growth rates** as well as **fecal count data**.

The ranch is centrally located in Fredericksburg, Texas.

Birth Type:
Comments: Extremely long in the spine and deep in his body. Sound in his legs. Heavy ram.

Breeder Spotlight: Ruffin Ranch

The Ruffin Ranch has been in the sheep industry for 140 years. We have always been focused on animals that thrive in harsh conditions. Producing commercial rams that last for years for the buyers with **good feet and legs, lots of meat distribution, fat layer under the skin, solid hide, hair** and a **docile character** are a few of the requirements to make it to the ram ranch.

We have enjoyed a lot of success in the show ring with multiple National Champions. But those sheep have to make it on the ranch—just like the rest of the flock.

We take biosecurity seriously. The entire flock is Johne's free. Detailed records are stored on each animal. We are Royal white and White Dorper enthusiasts!

Breeder Spotlight: Sisco Ranching Co.

Our family has been ranching in Water Valley for over 100 years, raising sheep and cattle along the North Concho River and surrounding areas. We have been raising and selling commercial white Dorper bucks and ewe lambs for over 10 years.

Barney Sisco bought his first set of ewe lambs from Craig Frizzell and his bucks from Wesley Glass of Sterling City, and we are committed to improving our herd through breeding and herd management.

Our goal is to raise **high quality** bucks and ewe lambs that can provide **genetic diversity**, **structural integrity**, and **ruggedness** to producers' herds across the state.

Breeder Spotlight: Cody & Jhenisa Stegemoller

Owners Cody and Jhenisa Stegemoller oversee every stage of breeding and care for their sheep. The flock grazes native grasses amid rolling hills, and each ewe receives customized nutrition based on production stage. The Stegemoller's focus on consistency in hardiness and growth ensures lambs adapt well to diverse environments.

Lambs are raised on rotational pastures under shade shelters, with daily handling to promote calm temperaments and early social bonds. Breeding choices focus on lamb vigor and mothering ability, supported by data from performance testing.

TAMU - COMING SOON!

The 10 Rambouillet rams are hardy and adapted to a west Texas environment, they were all born and raised on pasture, but furthermore have genetic merit for other traits that we believe positively impacts their future productivity. In our Rambouillet flock, prolificacy, parasite resistance, and wool quality are all traits we collect extensive records on to develop estimated breeding values for accurate genetic selection and we hope you find the included data on these rams helpful in your purchasing decisions.

THANK YOU TO THE TSGRA SPONSORS!

TAMU - COMING SOON!

While marketing seedstock is not the primary mission of our center, we are still proud of the livestock we have produced through our genetics research programs, and believe they can have a positive impact in many other flocks and herds.

Funds from these sales go directly back to support our livestock management, research efforts and extension education. We would love to visit with you further about how any of these rams or billies, or any of the sires from the excellent lineup of seedstock flocks and herds consigning to this sale, can help your operation.

TAMU - COMING SOON!

The meat goat billies have been selected from our 'Aggie Cedar Eater' (ACE) herd that is managed at the Sonora Experiment station, where many years of quantitative genetic selection for browsing cedar has been a priority. As a result, these goats have the physiological capabilities to consume 25-50% more cedar as a part of their natural diet.
